

ACTIVITY 1

Write here your observed 3 community problems and your proposed solutions.

1. There are some thief cases in our community that needs to give some solution either to track who is responsible for incident or to prevent such crime like this. The solution I propose for this is to have CCTVs in certain area that needs to be monitor beside physical inspection. This is also to prevent crimes like rape and murder.

2. I notice in our barangay hall that there is no system that provides history of cases recorded in some application. I wish I was wrong in my observation, however if there is such a case I propose first computer allotted with system application that can record cases not just in paper only.

3. My concern in some small enterprise that they have some products that are seldom or not being sold at all. My proposal to this concern is to have application that can make forecast for the products based on their movement within such period of that. Instead of money that being stock for some products that have no movement, it can be used to buy products that are in demand so that more income can be generated. The system can be expand to some platform that can advertise also their business and their products.
